

Basic Overview

This is a basic overview of the features of the Vinyl Cutter and Graphtec Pro software.

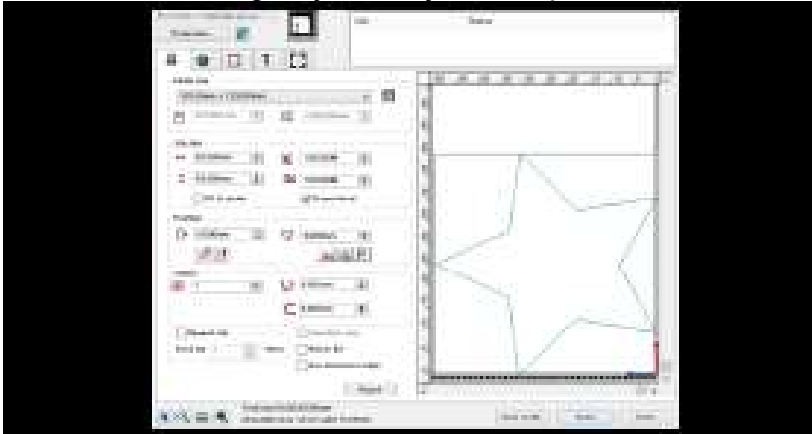

1. Creative Design

Design is created using Adobe Illustrator, CorelDRAW, Inkscape or Graphtec Pro software.

2. Cutting Master

Check the cutting object, adjust the position and the cutting conditions.

3. Cut

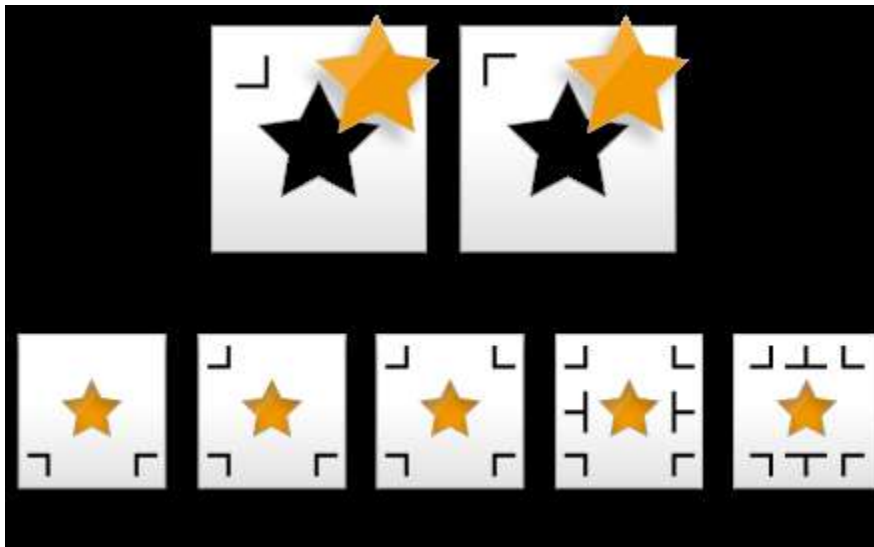

Cutting data is transferred to the cutting plotter. The cutting plotter starts the job.

4. Creating Registration Marks

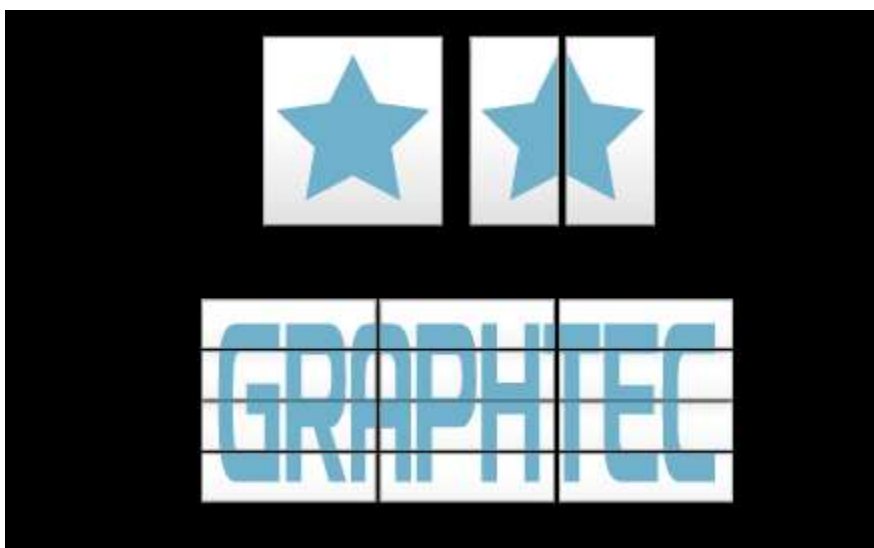

The registration marks can be added into the arts board of the design application software. It can be selected from 10 patterns according to the design object size and the precision of axis alignment in the Print & Cut applications.

Note: this function is for preprinted material that needs to be cut. The library's machine ONLY cuts

5. Tiling/Splitting the Object

The cutting object can be split into smaller tiles. When the object needs to be placed to the surface made by multiple panels or is larger than the width of the media, the object can be split to size for fit it.

6. Matrix Copy

It is used for creating multiple copies of the same object. The object is copied in specified matrix condition.

7. Weed Lines and Border

The border line and weeding lines can be added around the cutting object automatically and then it is cut. It makes easier to remove the excess material from the media.
